

inks for label printing:

Sirpi has developed a full range of inks and varnishes ideal for label printers.

Screen printing inks could be used by rotary screen printing technology or by flat screen printing machines whilst overprinting varnish are suitable for screen or Flexo printing units.

All these products are formulated to be printed on the most common materials used by label industry. They show a perfect adhesion on many different type of paper, self adhesive PVC, top coated polyethylene, corona treated Polyethylene and many other substrates.

screen-printing inks:

UV Plast: Glossy screen printing UV curable ink to be used on flat screen machinery. Easy to print,

very fast drying properties and high glossy finish are its main characteristic. They show good flexibility and they can be over embossed with hot embossing foils (hot stamp). We have available 12 basic shades (mixing system) plus an extra opaque hite and black.

UV Label: Matt UV curing screen ink which have been specifically formulated for printing labels with high speed multi-colour flat screen printing machines. They combine good flexibility, excellent adhesion and not reflective matt finish with fast drying property. The black colour is very deep and with a very soft touch effect. All colours of this series accept without problems hot stamping process.

UV Speed: UV ink with glossy finish specially formulated for rotary screen printing machines (Gallus, Stork). Very fast drying properties and the white shade is very opaque and can be easily overprinted by offset or flexo inks as it does not contain any silicon agent (silicon free).
